What is my site aiming to do?

People have used writing to express themselves and to communicate with others since the dawn of human history. They began to record information on the cave's walls, and later, on stone as well. Looking backwards, we can now see how human writing habits have evolved over time. We can see the beginnings of human use of books and the so-called "modern" method of book writing. However, looking back quickly, it has divided people into different social classes.

Everyone is aware of the classes of people who can afford books and those who cannot. However, there is one more class of people who are denied access to books because of their location. It is horrifying to think that while voting machines and ballot papers are easily accessible, books are frequently delivered late to students who live in isolated(remote) areas where it is difficult to transport goods.

A company organised a hackathon to improve their book torrent gadget, which allows students to download books on a low-cost device. The government is now funding the distribution of these devices, and I am creating a website that can be accessed on various devices. My goal is to make books available online for free, making learning more modern and accessible to everyone. This will provide a new way of learning while also making books easily and freely available to all.

My primary objective is to disrupt the book industry, structure it, and make it open source in order to ensure anyone in the globe, residing anywhere in the world, can use it and update it in real time.

Target Audience

It is clear that students who reside in the outlying remote areas are our target demographic. I am aware that modernising books and making them freely, easily, and more conveniently accessible online may be difficult, but it is not impossible. We strive to make a fully functional responsive website for students.

Objectives

At our core, we are driven by a bold and ambitious mission: to disrupt the book industry and to provide open access to knowledge for everyone on the globe:

1. Make books freely available
2. Change human behaviour of studying by adapting them to electronic forms of books
3. Provide access of books to student of remote district where books are hard to reach

We sincerely believe that everyone should have access to knowledge, regardless of their financial situation. We are dedicated to ensuring that books are freely available to everyone, irrespective of their location, background, or financial capabilities through our website(soft copy). In order to create a society where learning and personal development are accessible, we aim to remove the financial hurdles that many people have when trying to obtain books.

Design

As the creator of this website, it's important to me that our visitors have a positive reading experience. With that in mind, I have paid special attention to the colour choices in order to make the website easy to read in low light conditions. I understand the importance of using colours that are eye-friendly and not too harsh on the eyes. At the same time, I am also aware of the role that colours play in branding and how they can affect a visitor's overall perception of the website. That's why I have chosen colours that not only make the website easy to read but also create a welcoming and inviting atmosphere for visitors. All books that are listed on the website have book

covers, and all book's cover are made by me. Yellow colour is catchy and easily visible and appealing to students. So I used for it;

Font: The font that I have selected is **Inter, regular #484747** and **Goldman** . This font is a great choice as it is easy to read and has a clean, modern look. It's also a popular font that is used on many websites, which helps to create a sense of familiarity and ease of use for visitors.

Font for Headings: For headings, I have chosen **Goldman, bold #721100**. This is a great choice as it creates a visual hierarchy on the page, helping users to easily identify the most important information. The font colour stands out nicely against the light background, making it easy to read.

Button

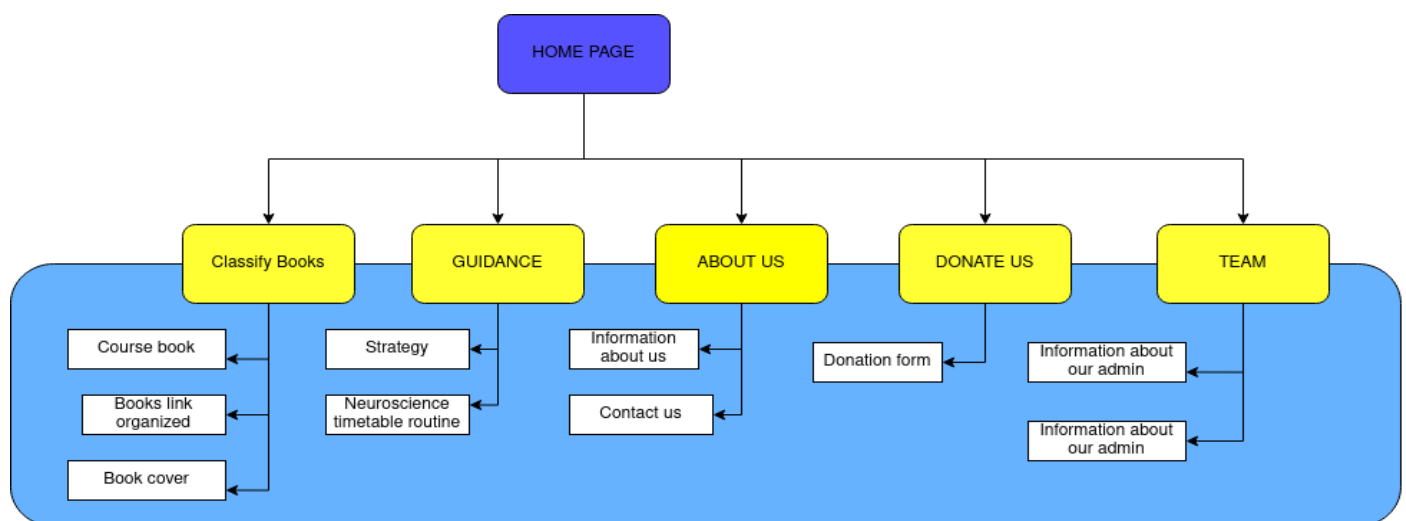

These are different variations of the button that I have used in my design. Each variation is different while hovering, when clicked, and in default form as well. I think using variations of the button is a great way to add visual interest to a website and make the user experience more engaging.

Font for Buttons: For the font on buttons, I have selected **Inter, black #484747**, which matches the font colour for the website. This creates a cohesive and consistent look throughout the website. The font is easy to read, making it simple for users to find and click on the buttons they need.

Interaction

To begin with, the logo on my website has a clean, elegant, and formal appearance that reflects the website's distinctiveness. Additionally, the mobile version of my design replicates that of the website, eliminating any ambiguity for the user. When users hover over buttons, it creates a more user-friendly experience, and the book covers on the website are particularly captivating, encouraging users to scroll and view each book. Making the site as user-friendly as feasible and valuing user participation are both crucial. In order to achieve this, I have included two crucial interaction aspects to my website.
